**PROFESSIONAL EXPERIENCE**

1972-present: Private practice of adult, adolescent and child psychiatry.

2004: Staff Psychiatrist, Child and Adolescent Psychiatry, In and Out Patient, Natchaug Hospital, Mansfield CT.

*Rima E. Laibow, M.D.*

Curriculum Vitae

June 2004

1998-1999: Acting Director, Child and Youth Mental Health Center, Charlotte Hungerford Hospital, Torrington, CT.

1993-Present: Private practice of Advanced Medicine specializing in the use of non-pharmaceutical modalities to determine and correct the underlying cause of disease and prevent premature ageing and chronic, degenerative disease.

In addition to clinical practice, I have engaged in and sponsored clinical and basic science research to explore and expand understanding of the mechanisms of disease and the efficient induction of healing and recovery. Through this active collaboration with a roster of internationally prominent scientists I have been privileged to participate in breakthroughs in the mathematics of consciousness, the fractal nature of bio-information systems and the physiology of neurological and physiological repair and the nature and impact of frequency upon biological systems. As an environmental physician I am strongly focused on challenges to individual and population health status and their correction and treatment.

My medical practice employs leading edge, non pharmaceutical modalities such as nutritional and environmental medicine, NeuroBioFeedback, Resonant Frequency Analysis, Cold Pulsed Photon Therapies, Electrical Stimulation and relies on advanced clinical testing to identify underlying metabolic abnormalities. Known as an "office of last resort" patients frequently come for consultation and treatment after their other options, both allopathic and "alternative" have disappointed them so they are open to novel means of treatment which offers us the opportunity to form a partnership for the construction (or reconstruction) of a healthy mind/body unit where before there was disease or disability.

We have pioneered the use of telemedicine in on-going, home treatment of head injury and chronic disease via NeuroBioFeedback and similar modalities world-wide.

I have a strong and continuing commitment to public information, lectures, health promotion and dissemination of significant information which has lead to on-going lectures, presentations, radio, TV, print media and other lay presentations.
