

Whereas:

-The Codex Alimentarius Trade Commission("Codex") sets food standards for international trade and urges their adoption by individual nations as their domestic standards

-Codex standards allow/mandate dangerous adulteration of the global food supply with toxic industrial chemicals, veterinary drugs, irradiation and other methods of food production and preservation antithetical to health and well-being founded in a healthy, nutrient dense diet of clean food

-Codex has classified nutrients as toxins and ratified the deadly Vitamin and Mineral Guideline (7/4/05) which will

-ban all but a small number of nutrients

-set nutrient doses so low they can have no discernable impact on any human being

-unscientifically use toxicology to determine ultra-low nutrient doses violating biochemical individuality and the requirements of optimal health

And Whereas

-Codex is explicitly hostile to optimal, ample or adequate nutrition

-Despite the known dangers, Codex permits deadly food contamination

-Codex mandates treatment of animals and food products with known chemical and radiological hazards

-Codex forbids dissemination of any claim or information which alleges any health benefit associated with food, nutrients, supplements or food components in the prevention, treatment, mitigation or cure of any disease, condition or disorder.

And Whereas

The **National Association of Nutrition Professionals** holds that

-access to unadulterated food and nutrients is central to human health and well-being

-unadulterated food and nutrients must be grown and produced according to sound food production principles uncontaminated by toxins of any type

-optimal health requirements vary widely because of biochemical individuality and toxic burden

Nutrition Professionals

-are well-trained in, and intimately involved with, the variation of nutritional requirements and variation in their clients' health

-must not be encumbered by restrictions on information or health-promotion strategies available to them

-may legitimately direct nutritional strategies for health

-may communicate nutritional and health information to their clients in the course of enhancing health and well-being

It is resolved:

The **National Association of Nutrition Professionals** publicly declares its support for

-Natural health principles and practices of sound health and vitality through nutrition and nutritional supplementation

-Benefits of clean, unadulterated food and nutritional supplements

-Dissemination of information related to the use of nutrition and supplementation for health achievement and maintenance

The **National Association of Nutrition Professionals** affirms

-Individualized nutrition and access to clean, unadulterated foods and supplements are the foundations of health

-The basic human right to the highest attainable standard of health endorsed by The Constitution of the World Health Organization

With the foregoing in mind, **The National Association of Nutrition Professionals hereby opposes**

-Dangerous and illness-promoting Codex standards and limitations on free speech

-Domestic and international standards which permit contamination of the food supply

-Limitations on access to unadulterated food

-Limitations on access to high potency, diverse nutritional supplements

-Limitations on dissemination of information about the health uses and benefits of food, nutrients and supplements

The **National Association of Nutrition Professionals** further opposes all efforts on the part of industry, consumers or industrial interests to weaken or overturn any protective laws such as the 1994 Dietary Supplements Health and Education Act which considers nutrients to be food with no upper limits set upon their use.

In recognition of the tireless and effective efforts of the Natural Solutions Foundation in promoting health and health freedom by alerting citizens and lawmakers to the Codex threat, the Board of Directors of the **National Association of Nutrition Professionals** hereby

-endorses and supports the work of the Natural Solutions Foundation

-endorses and supports the pro-health Revised Vitamin and Mineral Guideline presented to the Food and Drug Administration and US Codex Office on October 20, 2005

-encourages members of the National Association of Nutrition Professionals to support the adoption of the Revised Vitamin and Mineral Guideline in the United States and abroad through personal, professional and patient-based support.
