Natural Solutions Corporation – Chile, SPA

Planetary Vision Project (PVP)

A National and International Project in the Deep South

*The Planetary Vision Plan
From
Deep South Resources to the North*

Chile

Benin

HOT PEPPER PRODUCTION (SONGHAI ENUGU)

The Trustees of the Natural Solutions Foundation, an international NGO (Non-Governmental Organization) seek the support of Government and Civil Society to implement our Planetary Vision Projects (PVP). The world is in crisis. Thus, we come to you at a critical moment in human history with our Planetary Vision Project with its positive economic and humanitarian impact.

*Imagine
a World Where the More Capital You Invested,
The Better the World Became!*

Mission of the Natural Solutions Foundation:

Discover, Develop, Document, Demonstrate and Disseminate natural solutions to the issues which threaten our health, food and freedom, achieving and maintaining a healthy self, community and world

This world vision has inspired the Trustees of the Natural Solutions Foundation to create the Natural Solutions Corporation – Chile, SPA in conjunction with the Fund for Natural Solutions and its Planetary Vision Projects (PVP). Through the implementation of strategically here in Chile and elsewhere, selected, leading edge Planetary Vision Projects, conscious investors bring their assets and their values together for profitable, planet-protecting projects. The net result is changing the planet through mission-critical projects which can generate both substantial wealth and meaningful positive innovation. Doing so will help to repair our damaged world to pass it on to our children and theirs.

Natural Solutions Foundation President, Maj. Gen. Bert Stubblebine III (US Army, Ret.), has identified DNA-destroying technologies literally weaponizing the world against human survival..." They are:

- **Nuclear power**
- **GMOs ("transgenico") and other toxic food technologies**
- **Vaccine/drugs**
- **Environmental toxins**

Dr. Rima E. Laibow, MD has defined the damage caused by these assaults, which she has shown are based on similar mechanisms, as Genome Disruption Syndrome and has recommended the natural solutions for this condition; see: www.GDS-Therapy.com.

Economical, profitable and safe natural solutions are readily available, only awaiting adequate funding. For maximum global impact and profitability, these solutions must be implemented with "Passion, Perfection and Profitability" as Fr. Godfrey Nzamajo, PhD,

op, Founder and Director of one of our partner organizations, the Songhai Foundation¹, Benin, tells us.

The Natural Solutions Foundation, after extensive research, has concluded that many of the resources and solutions necessary to deal with these problems lie in Chile. Located in a low radiation zone (relative to the escalating disaster of Fukushima Daiichi) and already well-established as a major producer of high quality food, including organic certification with high standards, a modern commercial center and a stable, forward-leaning society with a strong educational and legal tradition, Chile offers opportunities which we believe coincide closely with the purposes of the Natural Solutions Foundation and are economically, environmentally and socially positive for Chile and for our target markets: Chile and the United States.

Effective positive global impact requires comprehensive systemic solutions, not superficial ones. With that clearly in mind, the Natural Solutions Foundation has created an interactive, dynamic program to create needed options and opportunities which deliver urgently needed goods and services in three areas:

- **Life-Enhancing, Advanced Drug-Free Health Care (Priority No. 1)**
- **Clean, Low Radiation, “Beyond Organic” Unadulterated Food (Priority No. 1)**
- **Model Purpose-Driven Communities to Enhance and Enliven Their Inhabitants (Priority No. 2)**

The specific projects that constitute the Planetary Vision Projects may change with time and circumstances. We begin with projects that are “doable” and sustainable. These include:

- **The Dr. Rima Institute & Compounding Pharmacy providing Natural Medicine and health care options for the people of Chile and medical tourists from abroad (Priority No. 1)**
- **The Friendly Food Coop International CSA bringing low radiation organic food from Chile to the Fukushima-contaminated Northern Hemisphere, beginning with the United States (Priority No. 1)**
- **The Natural Solutions International Community Development (Priority No. 2)**

Each part of the PVP model is:

- **Scalable**
- **Replicable**
- **Financially independent**
- **Functionally independent**
- **Capable of being productively interdependent with other aspects of the PVP model.**

Projects are designed to stand alone financially and functionally, but also to gather additional strength and profitability from supporting and strengthening organic relationships with other PVP modules.

¹ Songhai Foundation, Benin, Africa, is a UN Recognized Center of excellence. www.Songhai.org

For example, the Medical Services require clean, uncontaminated supplies (e.g., intravenous or oral nutrients). Because of several factors, including:

- Fukushima's cataclysmic radioactive contamination of the Northern Hemisphere,
- Inadvisability of sourcing any raw material from the US or (already heavily contaminated) China
- Intentional addition of toxins like aluminum to currently available Northern Hemisphere medical supplies

Northern Hemisphere sourcing is no longer possible.

The Compounding Pharmacy and the Dr. Rima Institute

Therefore, the Compounding Pharmacy, a project of the Dr. Rima Institute, will supply the Medical Center(s) and, with proper marketing, other health facilities and professionals all over the world. Because of Chile's favorable trade connections and opportunities, profitability and efficiency are strongly enhanced for both the medical and Compounding Pharmacy businesses located in Chile.

A Compounding Pharmacy is **not** a drug company, nor a pharmaceutical producer: we will compound only natural products and remedies for administration under the supervision of health care professionals or direct to the consumer, as appropriate. The Foundation seeks the aid of the Chilean Government and Civil Society in locating a first-class facility that can carry out low radiation "green and clean" production of nutrient supplements, herbal and other natural remedies, homeopathics, and similar, leading-edge modalities.

Natural responses to maintain wellness and interact with illness is gentle, inexpensive, generally requires low technology facilities, is environmentally friendly both to the internal ecology of the patient and to the larger environment. Even more important, natural responses are effective, well beyond the success rate of harsher, more expensive, higher technology allopathic approaches which, without massive statistical "creativity" are, in fact, generally poorly effective at best. Both empirical knowledge and academic research make it clear that natural medicine cuts the cost of health care dramatically and creates health, not managed illness, in equally dramatic ways.

An integrative treatment system makes sense medically, economically and emotionally. It also will create savings of life and money for Chile's population while serving as a magnet for natural health seekers everywhere as pharmaceutical corporate interests prevail upon nations to limit, and eliminate, natural health options for their populations.

Leading a team of licensed Chilean health care professionals, Dr. Rima will train, direct and oversee natural treatment and therapeutic interventions for Chileans and medical tourists.

The Dr. Rima Institute will serve as a teaching and clinical services institution. We have a strong interest in transferring this knowledge and methodology to the Chilean institutions which can multiply their impact by providing low cost, low technology, high quality, high-impact treatment to the people of Chile, regardless of income.

The General Bert Multi-Sensor™
<http://www.GeneralBertMultiSensor.com>

Accurate diagnosis and treatment requires accurate measurement of biomarkers. It requires the biofeedback between the individual's biomarkers and the "biomarkers" of the environment.

Joe Jesson, our guest on the *Dr. Rima Truth Reports* (May 20 and July 29, 2012) is a sensor specialist, IT engineer and a 2007 GE Edison honoree. General Bert, who commanded the US Army's Electronic Research and Development Command (ERADCOM), has authorized Joe to develop a special, personal radiation sensor system.

General Bert's commission to Joe is to develop the General Bert MultiSensor™ to give you urgently needed real-time information, such as radiation and other environmental hazard exposure, and personal bio-marker response data.

Working with Dr. Rima, General Bert, Counsel Ralph Fucetola and Joe have identified critical markers which will quickly, easily and efficiently give the information needed to protect people and their families.

The General Bert MultiSensor™ allows radiation data to upload to a special portal in near-real-time to allow users to generate and respond to real radiation information and generate timely warnings.

"It is very simple", says General Bert, "the urgently needed radiation information requirement has abandoned by the governments, so we, the People, must become informed in order to protect ourselves. My technology puts information, the ultimate power, where it belongs: in your hands. People like you, with families like yours, absolutely need this information to determine your risk and select your responses. For this reason, I have directed my team to create this essential tool you must have in the post-Fukushima world."

In collaboration with Doctor Rima, the General Bert MultiSensor™ has been designed to track your essential bio-markers under various environmental conditions. The Multi-Sensor™ is the modern, post-Fukushima, biofeedback solution.

Educational Mission

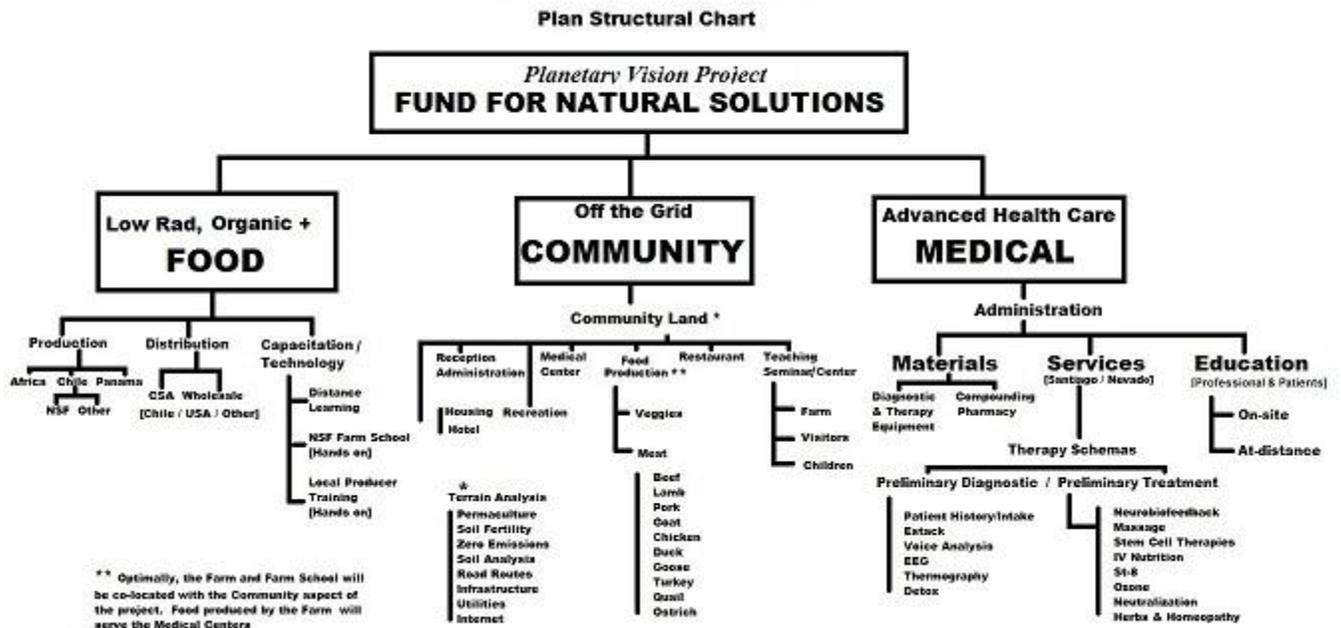

Education, both distance-learning and hands-on training, is essential to the Planetary Vision Project (PVP) model. Public relations, seminars, agricultural and medical capacitation and training, publications, internet messaging and other diverse communication tools will bring our innovations to Chile and to the world market.

The Natural Solutions Foundation brings a number of low technology, high impact techniques to both agriculture and medicine. By enhancing both crop yield and storage time minimal addition cost, we can open the previously technically difficult organic Chilean vegetable market in the US.

Crop yield, storage capacity and soil reclamation leading to more nutrient dense organic food lead to health improvement, reducing the cost of public healthcare and increasing the well-being of the population which partakes of these strategies. For those who are ill, natural treatments are non-toxic, significantly cheaper, more effective and require far less costly infrastructure than high technology allopathic options.

Both empirical science and academic science make clear the efficacy of these natural treatments, procedures and strategies. We will provide both educational services, and, in the area of Advanced Health Care, provide the treatments and therapies that can make a real difference in promoting a healthy lifestyle in clinical settings.

The following diagram presents an overview of the Chilean sector of the Natural Solutions Foundation's PVP model:

** Optimally, the Farm and Farm School will be co-located with the Community aspect of the project. Feed produced by the Farm will serve the Medical Centers

FACTS BEARING ON THE PROBLEM

- **MALIGNANT GLOBALIST AGENDA:** Powerful international corporate and governmental forces are pursuing irresponsible policies resulting in declining economic conditions and compromised health/reproductive status for huge numbers of people. Those policies are also massively destructive to the global environment. The Natural Solutions Foundation's PVP projects are carefully designed to reverse those trends through profitable, reproducible, scalable and transferable technologies and programs.

- **FUKUSHIMA DAIICHI:** Fukushima Daiichi's destruction (March 11, 2011) and subsequent cataclysmic radioactive contamination of the Northern Hemisphere has increased the need for low radiation goods, abodes and services in, and from, the Low Radiation Southern Hemisphere
 - The atmospheric separation of the air currents of the Northern and Southern Hemispheres, while not absolute, offers relative safety for people, products and locations sourced from, and located in, the Deep South of South America (i.e., Chile) and Africa.
 - The lack of any meaningful effort to control the radiation at the Fukushima site and the worsening situation there mean that the contamination will continue to increase for what, in human terms, must be considered forever.
 - Best case scenarios predict a continual contamination of the entire Northern Hemisphere, its food, its farms and its genetic material. Worst case scenarios predict rapid and catastrophic increases in radiation levels in the Northern Hemisphere². The consequences of either scenario are dire.
 - Health and productivity will decline sharply in the Northern Hemisphere as they did in the former Soviet Union following the Chernobyl disaster more than 25 years ago.
 - All Northern Hemisphere food is already contaminated with radioactive isotopes. That contamination escalates unabated. Corporate and government inaction and the laws of physics decree that the level of contamination will only increase.
 - Chernobyl, a single reactor, entombed 7 years after the event, was responsible for approximately 1 million deaths in Europe alone. Fukushima Daiichi is a collection of 5 disabled reactors with a 6th soon to deteriorate. Little or no control is being implemented and it is not clear that meaningful control of the exceedingly radioactive spent fuel rods can, in fact, be implemented, or that the destroyed reactors can be controlled now that meltdown conditions have been established with continuing deterioration.

²<http://www.youtube.com/watch?v=XPEXI06yG9k>

SOLUTIONS TO THE PROBLEM

- **DRUG-FREE NATURAL MEDICINE:**

Non-toxic, gentle, effective health strategies and medicine appeals to growing numbers of people in Chile and around the world

- Natural health care practice and associated modalities are increasingly unavailable because they are subject to aggressively and hostile regulation in the Northern Hemisphere and elsewhere. Such hostile regulation is apparently not part of the government approach to health in Chile.
- Strong consumer demand for natural medicine has created an enlarging market segment.
- Out of pocket, unreimbursed natural health care is the fastest growing health sector in North America.
- Increasing numbers of health care consumers know about suppressed or banned safe and effective treatments for serious diseases. They are willing to go to great lengths to seek them out driving the medical tourism market, a rapidly growing sector of the global economy.
- Because natural medicine treatments are not generally reimbursed by insurance plan, payment is rendered at the time of service, creating a strong cash flow model.
- Age prevention/reversal is a hotly sought natural medicine practice area which requires little equipment and produce loyal, happy word-of-mouth advertisers who refer others and frequently return. High quality supplies (including bio-identical hormones and nutrients) support this helpful and highly lucrative area.
- Stem cell treatment for a variety of diseases is well accepted, profitable and strikingly effective for many of conditions which are poorly responsive to allopathic medication.
- Cardiovascular disease, cancer, auto immune disease (including diabetes I/II), psychiatric illnesses, serious infections, environmental toxicity, premature aging, head trauma and autism are only a few of the serious maladies which routinely can be expected to yield to natural treatment.
- Residential treatment with pristine food provided on a prescriptive basis is an essential component of consistent good outcomes for seriously ill patients.
- Residential facilities which allow spouses, children, friends or others to stay with the patient increase outcome success, reduce patient care and attention costs and lead to happy memories of the treatment, care and experience fostering good word-of-mouth advertising.

- **FOOD:**

Clean, unadulterated food is no longer possible to produce or source in the Northern Hemisphere because of:

- **Radiation:** Accelerating levels of radiation contamination make the growth and distribution of low radiation food impossible in the Northern Hemisphere. The laws of physics and lack of meaningful control strategies at Fukushima make worsening contamination inevitable for the entire Northern Hemisphere offering a strong market potential for food suppliers who fill this niche.
- **Genetically Modified Organisms** (e.g., GMO, “transgenico”) contaminate most food products from the Northern Hemisphere. Strong public opposition makes food grown in Chile desirable if it meets rigorous standards for purity and does not contain modified genetic material.

- **Chemical Contamination** of foods is an increasing concern to consumers since they understand that agricultural and other environmental chemicals are associated with a plethora of diseases and system failures.
 - North American consumers seek clean food and will pay premium prices for the perceived value added of that clean food. The only segment of the food market in the United States and Canada which has shown strong regular growth (22-24%) year after year against a flat conventional food market curve is organic food.
 - Chilean food has established a high perceived value in the United States.
 - The Natural Solutions Foundation's hundreds of thousands of supporters understand that their food is radioactive and are eagerly awaiting the operational opening of the Friendly Food Coop, <http://www.FriendlyFoodCoop.org>
 - A fully functioning multi crop BeyondOrganic, Bio Intensive, Zero Emissions farm and farm school in Chile will both add food to the food chain domestically in Chile, service the Medical Center(s), provide clean food exports to the Northern Hemisphere and will allow hands-on practical training for farmers from all over the world. Our technologies and that of our agricultural partner organization, the United Nations Center of Excellence-recognized Songhai Foundation in Africa can be expected to have a significant positive impact on food production practices, increased output, quality and desirability of food here in Chile and the United States.
- **NATURAL TREATMENT MATERIALS AND SUPPLIES**
Clean, unadulterated injectable, oral nutrients and herbs, hormones, etc., are central to the practice of natural medicine. Once easily available in the US and Canada, they are now permanently unobtainable in the Northern Hemisphere because of Fukuhsima Daiichi. For that reason, all materials must be sourced or created in the Southern Hemisphere.
 - Essential evaluation equipment and devices, including the **General Bert MultiSensor™**.
 - Injectable, nutrients, herbs and other natural medical supplies can no longer be sourced from the United States or Canada. It is therefore essential to this project to assure a low radiation source of these materials from the Southern Hemisphere. The excellent financial promise of this enterprise far exceeds merely supplying the Dr. Rima Institute Facility (and others like it) and will be discussed in a separate document.
 - Clean, unadulterated Friendly Food Certified (Friendly to the Environment, the Worker and the Consumer) food will be sourced from
 - Natural Solutions Foundation's own BeyondOrganic Farm and Farm School
 - Organic, Fair Trade Chilean producers.
 - We are currently in highly productive discussion with a Fair Trade and others certifying capacitation and export company in Santiago to incorporate their outstanding food supply into the food available for the Medical Centers, Community and the Northern Hemisphere export division of the PVP model.
- **COMMUNITY:**
A land-based facility consisting of:

- Farm and Farm School: Our Beyond Organic Zero Emission Bio Intensive Farm and Farm School. Our JV partner in this part of the project is Fr. Godfrey Nzamajo, PhD, op. Fr. Godfrey is a Professor Emeritus of Optical Engineering at University of California, Davis, and the Founder and Director of the Songhai Foundation, Porto Nuveau, Benin. His agricultural systems are low technology, net energy producing, high output organic farms which can be replicated and iterated in every ecological niche. He will design and implement our farming activities once the land is located and secured. He will also act as a technical advisor to Chilean farmers to upgrade their production, output and quality.
 - Housing: Like-minded people have expressed strong interest in living in a community engaged in, and based around, the work of the Natural Solutions Foundation's PVP. At least 15 households have already committed to doing so and with the radiation hazards, many more individuals and families are eager for a place to settle which provides the advantages of a low radiation location plus the other features of this project.
 - Dr. Rima Institute Treatment Center: Since other health facilities are envisioned, it seems logical to include a health facility within the project. A natural medicine treatment center would be both financially productive and practical.
 - Hospitality: Hotel facilities for eco tourists, seminar and health visitors and others are essential to this model.
 - Restaurant: Food service for residents, visitors and hotel guests using our pristine food is important to the project. Prescriptive diets for the Medical Facility patients are essential and would be prepared in our restaurant facility.
 - Administration: Registration, hospitality, procurement, maintenance, etc.
- **EDUCATION:**
All modules of the PVP are designed to carry out education using strategies divided into:
 - Hands-on training at the site of our medical or other activities or, in the case of food production, at the site where our producer's food is grown and processed.
 - Distance learning through internet webinars, videos, video conferencing, etc. For example, Dr. Rima Laibow MD's course in IV Nutrition and Chelation naturally links to the development of the Compounding Pharmacy through world-wide education of physicians in the use of materials we can provide from the Compounding Pharmacy and can offer a strong referral base to our centers for treatment beyond the potential of the trainee's facility.

STRATEGIC ALLIANCES

Beyond Organic, Biodynamic, Zero Emissions, Low-Radiation Food

Natural Solutions Foundation has formed strategic alliances with a leading Organic Producers' capacitation, marketing and exporting company in Chile and with the Songhai Foundation, Porto Nuveau, Benin, West Africa. The Songhai Center is Fr. Godfrey Nzamajo's UN-recognized "Center of Excellence" and an outstanding example of high output, low tech, zero toxic input, energy positive zero emissions farming.

Please watch the 8 minute introductory video of Dr. Rima, Fr. Godfrey and Gen. Bert discussion beyond organic, biodynamic, zero emissions agriculture:

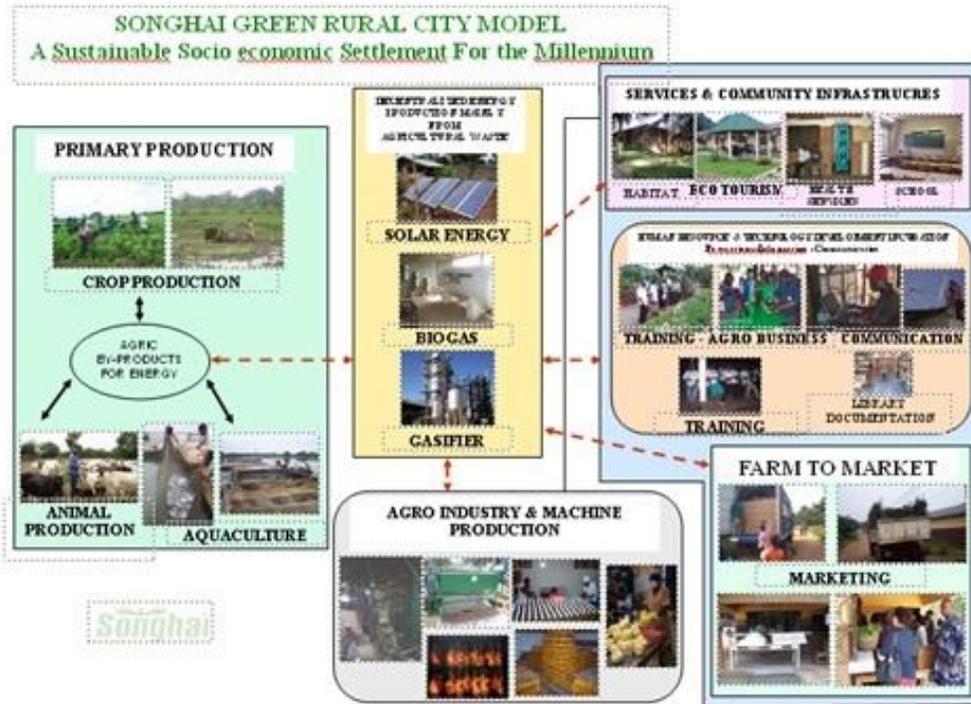

<http://youtu.be/IOhBtHpCtAg>

"The deep South – Africa and South America – have the human and environmental resources and capacity to feed the North: Europe, Asia and America low-radiation, biodynamic, zero emissions food. What we need is the capital to implement."
Fr. Godfrey, Songhai Director.

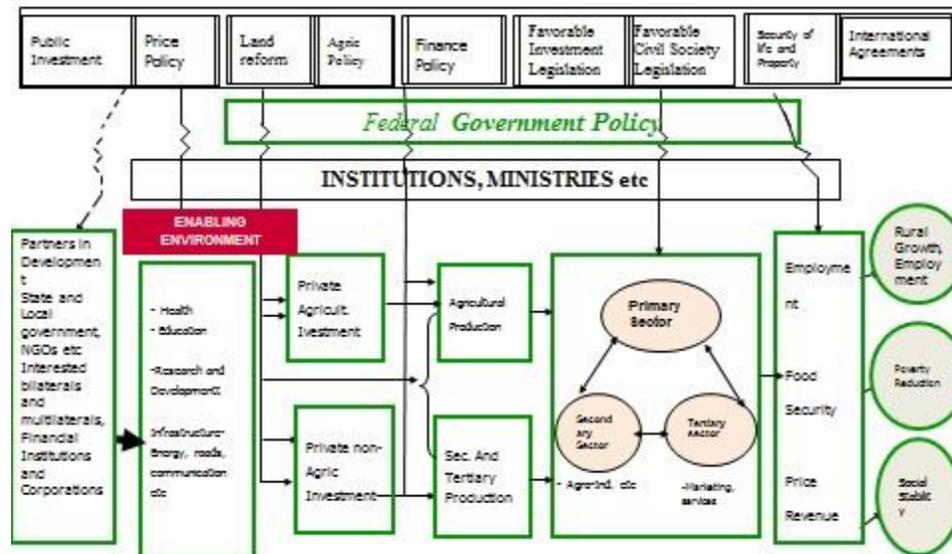

Some of the innovative, environmentally sustainable, yield- increasing technologies of the Natural Solutions Foundation are currently being tested at Songhai and at the Valley of the Moon (VotM) Eco Demonstration Project in the bountiful, beautiful, temperate Highlands of Chiriquí Province, Panama. VotM Eco Demonstration Project is a project of the Natural Solutions Foundation and is currently producing *BeyondOrganic™ Biodynamic Zero Emission Valley of the Moon™ Coffee* which is exported as a high quality premium coffee to the United States.

The Trustees have visited South America six times during the past year and have now established a permanent base there, making *The South shall feed the North™* a reality. Indeed, the *South shall heal the North* as well.

Overview of the Songhai Zero Emissions Initiative

A MULTI-PARTNERSHIP IN A STRATEGIC DEVELOPMENT PROGRAM

Fund for Natural Solutions

**US SEC filing information for the Form D Private Placement:
Filing No. 021-167619 / 111150148 – CIK #0001532833**

The Fund is a SEC-filed private equity fund sponsored by the Natural Solutions Foundation, an exempt, international NGO (non-governmental organization). We accept private funding from those who seek to structure their international investments to reflect their values. The projected overall ROI is 5 to 8%. The initial Regulation D tranche, and each subsequent tranche, is set at \$10 million US. Thirty tranches will be implemented. This Plan envisions consecutive fund raises totaling \$300,000,000. In so far as the Fund is subject to Chilean Law, the Trustees will seek local counsel and conform to local rules and regulations.

This is not a public offering and is void where prohibited by law. This information is a private, expressive association communication to associates and supporters of the Foundation. A Private Placement may only be made through a Private Placement Memorandum (PPM). Please complete the Questionnaire if you are interested in receiving the PPM, located at www.FundforNaturalSolutions.org .

The Fund and its representatives may from time to time make written or oral forward-looking statements. One can identify these forward-looking statements by use of words such as "strategy," "expects," "plans," "anticipates," "believes," "will," "continues," "estimates," "intends," "projects," "goals," "targets" and other words of similar meaning. One can also identify them by the fact that they do not relate strictly to historical or current facts. These statements are based on our assumptions and estimates and are subject to risks and uncertainties. In connection with the "safe harbor" provisions of the Private Securities Litigation Reform Act of 1995, the Fund is hereby identifying important factors that could cause actual results and outcomes to differ materially from those contained in any forward-looking statement made by or on behalf of the Fund; any such statement is qualified by reference to the following cautionary statements.

The Fund's business is subject to competition and changes in the marketplace, and other risks both known and unknown. Our results are dependent upon our continued ability to borrow money from private lenders, anticipating and responding to changing market conditions, and other important factors incorporated into this section by reference, which could cause the Fund's results to differ materially from results that have been or may be projected by or on behalf of the Fund. The Fund cautions that the foregoing list of important factors is not exclusive. Any forward-looking statements are made as of the date of the document in which they appear. The Fund does not undertake to update any forward-looking statement that may be made from time to time by or on behalf of the Fund.

**www.FundforNaturalSolutions.org
Filed with the US SEC on October 20, 2011
Filing No. 021-167619 / 111150148 - CIK #0001532833**

Preliminary Funding Estimates

The *Fund for Natural Solutions* Planetary Vision Program

All Figures in \$US

The *Fund for Natural Solutions* is seeking \$10,000,000 through our first SEC-filed Private Placement Memorandum. This structure is designed to be replicated for additional funding since projects under development will require a higher level of funding. Current PVP projects include:

1. Purchase and expansion of existing or new off-shore, fully licensed International Medical Tourism and Compounding Pharmacy facilities (natural health solutions). This investment has the potential for a rapid ten-fold increase in gross sales through the Pharmacy to Holistic Doctors world-wide. **-- \$35 M**
2. Expansion of Fr. Godfrey's radiation-free, Certified Organic, bio-dynamic, zero emissions Songhai Initiative (Benin) to 3 southern hemisphere locations, to provide clean, toxin and GMO-free food to aware consumers in the developed nations, with marketing and distribution through our "international CSA" Friendly Food CoOp, www.FriendlyFoodCoop.org (natural solution to contaminated food, while providing proprietary educational opportunities through farm schools) **-- \$6 M each, total: \$18 M**
3. Expansion of our existing 50 acre, truly All Natural Valley of the Moon brand coffee finca (farm) to compete in the high-end global coffee market. **Using natural means our happy coffee bushes have doubled production in each of the past four seasons** (natural solution for the world's favorite, high antioxidant beverage); clinical development of the very powerful antioxidant qualities of the uncured Coffee Fruit, as a new dietary ingredient www.ValleyoftheMoonCoffee.com **-- \$2 M**
4. Expansion of our Distance Learning capacity to a world-spanning medical and agricultural education system (natural solution to health & food education). Dr. Rima Laibow MD's Johns Hopkins approved CME (Continuing Medical Education) course in IV Nutrition and Chelation naturally links to the development of the Compounding Pharmacy **-- \$1 M**
5. Expansion of the original Wellness Center Facility (#1 above) to encompass advanced health destination/treatment to 3 other southern hemisphere locations (possible natural health

solutions locations: Chile, Uruguay and Benin). The facility will include accommodations and educational facilities at each location. These facilities will each be co-located with a BeyondOrganic farm and farm school (see above).

-- \$4.5M each, total \$13.5 M

6. Development of 3 international holistic, Eco-friendly Resorts and residential communities (natural retirement and living solutions locations: Chile, Uruguay and one other location). These facilities will each be co-located with a BeyondOrganic farm and farm school (see above)

-- \$5 M each, total \$15 M

7. Development in Joint Venture with Joe Jesson of the **General Bert MultiSensor™**. This advanced, PAD compatible biofeedback device will become the essential tool for advanced health care practitioners and concerned individuals alike. The initial cost estimates are:

1. Initial engineering:	\$10,000	-\$25,000
2. Bench development of working model:	\$25,000	- \$50,000
3. Preparation and testing of beta model (100 units)	\$50,000	- \$90,000
4. First limited production run (1,000 units)	\$200,000	- \$500,000

Since the companies with which we will need to work will expect that we will be fully funded before developing the product, it will be necessary to have at least \$675K to \$1M to begin this project

8. Contingency Fund:

-- \$1 M.

Total Estimate for this phase of the PVP projects: \$86,500,000.00

CONCLUSION

Total Planetary Vision Project investment needs: \$86.5 M

ROI annually: \$3 - 5 M

Implementation: 1 to 10 years

Term of investment: Minimum 10 years

The Fund and its representatives may from time to time make written or oral forward-looking statements. Plan Structural Chart

** Optimally, the Farm and Farm School will be co-located with the Community aspect of the project. Food produced by the Farm will serve the Medical Centers
